TO WHOM IT MAY CONCERN

Jordan served as an intern with Mdesign Solutions Pte Ltd a.k.a. **MDS+** for a 3-month internship from 19th December 2024 to 4th February 2025.

I first met Jordan was on a networking session co-hosted by NUS MedTech Society and NTU Biomedical Engineering Society BMES. In contact with him during the session, Jordan shown enthusiasm and eagerness in exploring new domains. He had expressed interest in joining MDS+ for internship. Hence, he took his initiative in applying the internship and I have welcome him to join us.

During his internship, several projects' tasks were assigned to him based on his knowledges in simulation. He demonstrated an exceptional ability to tackle complex engineering challenges with creativity, precision, and dedication.

His focus was mainly on thermal simulation on Live Steaming Camera and Lidar System that docked on top of a robotic surveillance dog. Jordan played a crucial role in enhancing the thermal management system by conducting heat simulations in SolidWorks to cyclically improve on the design's heat dissipation. His ability to analyse data, refine designs, and propose practical, well-thought-out improvements was truly commendable. Beyond his technical expertise, Jordan also excelled in documentation, reporting, and presenting his findings. His presentation on the heat simulation to the stakeholder was clear, insightful, and demonstrated a strong grasp of both the theoretical and practical aspects of his work.

His contributions extended beyond simulations, including 3D printing prototypes of customized endoscopes to deploy colonic support stent. A loading simulation on the colonic support stent strength.

He also did project ideation and magnetic simulations in COMSOL Multiphysics for Magnetic Concentrator, an external magnetic device to activate a magnetic valve in a capsule to be in human stomach. And he has shown a strong grasp of heat and magnetic simulation work.

A self-motivated and efficient individual, Jordan managed his responsibilities with minimal supervision. He excelled at time management, streamlining workflows, and running multiple tasks in parallel to ensure timely delivery of all project objectives. Jordan's dedication, reliability, and eagerness to learn were evident throughout his internship. He willingly supported team members beyond his assigned responsibilities and consistently exhibited a collaborative and proactive attitude.

The underpinning strength for Jordan to be an outstanding performer is his positive attitude in approaching various assignments and challenges. At MDS+, we value interns who take initiative, push boundaries, and approach engineering problems with a hands-on, solution-driven mindset. Jordan exemplified all these qualities, and we have no doubt that he will make a significant impact in his future endeavours. It was a pleasure having him on our team, and we highly recommend him to any organization looking for a talented, driven, and forward-thinking engineer.

Jordan is expected to be an asset to any team and will ascend to expectations given the right opportunity.

Yours sincerely,

Lim Eng Seng
